PROFESSIONAL SUMMARY

Front-end-focused developer with 3+ years' professional experience building React and TypeScript applications, shared component libraries, and development tooling. Co-founded an events business generating £100k+ in total sales and, as sole engineer, designed and built its customer portal and e-commerce platform. Currently leading team adoption of agentic AI development (Claude Code).

EXPERIENCE

Isherwoods · Gateshead, UK

Apr 2023 - Present

Marine engineering company supplying maintenance-management and ILS software to shipping and naval customers including the Royal Navy; work centres on the next-generation product ahead of commercial launch.

Software Developer

Nov 2024 - Present

Promoted from Junior Front-End Developer; now also reviewing colleagues' pull requests. Part-time Jan-Apr 2026 while running Nuerai; full-time otherwise.

- Extracted a tightly coupled React component library into a standalone monorepo package, enforced module boundaries with custom ESLint rules, and accelerated builds approximately 10x with esbuild
- Redesigned the frontend around Fluent 2 by reworking the shared React component library, propagating consistent design patterns across nearly every screen
- Built a Word-style rich-text editor for technical documents using Lexical, with custom nodes for figures, captioned tables, and admonitions
- Built a React editor for the JSON schemas driving auto-generated product screens, supporting deeply nested structures and direct local file editing
- Reduced frontend test runtime by ~50% locally and ~40% on CI. Migrated CI from Azure DevOps to GitHub Actions, cutting full pipeline runtime from ~14 to ~6 minutes at no additional compute cost
- Built a Docker Compose development environment simulating four replication sites, with isolated backends and databases, enabling the full multi-site system to be developed and tested locally
- Led team adoption of Claude Code through repository guidance and developer training; built isolated worktree environments with dedicated ports and MongoDB copies to support parallel agent sessions
- Created the team's first synthetic development dataset using AI-assisted workflow analysis, covering the application's main processes without relying on customer data

Junior Front-End Developer

Apr 2023 - Nov 2024

- Migrated 29 screens from AngularJS to React and resolved 18 critical bugs
- Built a command palette with a virtualised list and full keyboard navigation for jumping between screens
- Developed a drag-and-drop dashboard builder using Gridstack and Visx for KPI data visualisation
- Introduced automated testing with Jest, later moving to Vitest, across the migrated screens

EXPERIENCE (CONTINUED)

Nueral · Co-Founder & Technical Lead

Jan 2025 - Apr 2026

Concurrent with Isherwoods. Events company delivering two 10-day, ~50-person car rallies from northern England to Marrakech (Apr 2025 and Apr 2026); £100k+ in total sales.

- Sole engineer: designed the customer portal and e-commerce platform in Figma and built it with Next.js, MedusaJS, and PostgreSQL. Used for the second rally's documentation collection and leaving-party ticket sales; rally bookings used Stripe payment links
- Designed the product-configurator page, cart, and checkout using Baymard Institute usability research
- Implemented Stripe payment plans via a custom MedusaJS payment module, alongside a ticketing module, automated email notifications, and post-purchase add-ons
- Developed a customer portal collecting travel documentation, with passport data encrypted at rest and restricted to admin-level access
- Built a launch-ready location-guessing competition with a Leaflet map and integrated ticket purchasing
- Co-owned product decisions, led payment-provider negotiations, and co-ran both international events

MOOV Global · Co-Founder · Logistics

Sep 2021 - Oct 2022

- Secured and maintained contracts with clients including Yodel

Vintworx · Co-Founder · Vintage clothing e-commerce

Sep 2019 - Jun 2021

- Achieved £35,000 turnover in under 2 years as a verified Depop top seller with a 4.9+ star rating across 350+ reviews

VOLUNTEERING

Driving Ukraine (charity) · Volunteer Web Developer

2024 - Present

- Built the charity's website in WordPress; currently rebuilding it in React

EDUCATION

Northcoders Bootcamp · Trainee Full-Stack Developer

Nov 2022 - Mar 2023

Newcastle University · BEng Chemical Engineering, First Class Honours

Sep 2018 - Jun 2021

SKILLS

Languages	TypeScript, JavaScript, HTML, CSS, SQL
Frontend	React, Next.js, Fluent UI, Lexical, AG-Grid, Visx
Backend & Data	Node.js, Express, REST APIs, PostgreSQL, MongoDB, Stripe
Tooling	Nx, esbuild, Vite, Vitest, React Testing Library, ESLint, Docker, GitHub Actions, Git
Design & AI	Figma, Design systems (Fluent 2), Claude Code
